

# ALL IN PEDIATRICS

## We Want Your Feedback!

In an effort to continuously improve our practice, we would like to ask you to complete this brief, 7 question survey about our patient communication methods. Thank you in advance for your participation.

[Take the survey.](#)

## Back to School and Meningitis

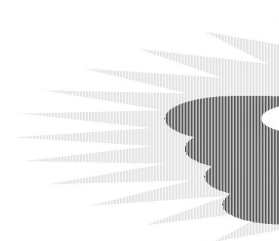

While we recommend the meningitis vaccine for all of preteen and teenage patients, if you have a college age child, it's even more important. Due to the close living situations on most college campuses, our children are even more susceptible to the transfer of the meningitis virus. If your child has not received the meningitis vaccine, aka Menactra or Trumenba, please contact our office immediately to schedule an appointment for your child to receive the vaccine. This is a two dose vaccination. We will schedule the second dosage when the first dose is given.

## Your Child and Social Media

Snapchat, Instagram, Facebook... OH MY! Does it seem like there's no end to the ways we communicate with our world? With all of the social media options, how do you know who your child may be "talking" to on a regular basis? Due to the risk of predatory behaviors, we urge you to be in constant conversation with your children regarding their use of social media and know their passwords to all media accounts. Whether you read their posts and check out who they're "friends" with or not - just knowing you can may

be enough to keep them from posting personal information. What can be a great way to communicate with friends and family, can also expose your child to people with ulterior motives.

In addition, we caution our parents to limit your own use of posting personal information about your children on any media or consider limiting your posts to just your "friends" rather than the public setting. The more personal information available to those who wish to cause harm, increases their chances of identifying your children online.

## Help Us Welcome a New Team Member

Welcome Amber Fillips, Physician Assistant and Registered Dietician, to All IN Pediatrics. Amber is joining us from a pediatric office in Florida. She is a native Louisvillian, so she is happy to be back in the area. Amber is a graduate of Western Kentucky University and University of Kentucky.
